## Notification of changes - reminder New encapsulation material for SMT inductors of case size 1210

As already announced in UPtoDATE 110315IN1 and PCN MAG-205160211 of March 15, 2011, a new PPS material has been introduced to encapsulate the EPCOS SMT series of inductors SIMID 1210-100, 1210-H100 and 1210-T. This is due to the withdrawal of the currently used encapsulation material by the manufacturer.

Affected products

Ordering code
B82422A*100
B82422H*100
B82422T*

Planned introduction: July 31, 2011 (after customer release)

Customer samples: Available since March 2011

Because the residual stocks of the previous yellow material are limited, it can no longer be assured that components can still be supplied in the current yellow version after **October 31, 2011**. Therefore, please convert immediately to the new black encapsulation material, so that all new deliveries from the end of October can be of the new black PPS material.

This planned change has no effect on the quality and reliability of the affected products. The agreed electrical and mechanical properties remain unchanged.
